

## B. Introduction and Product features

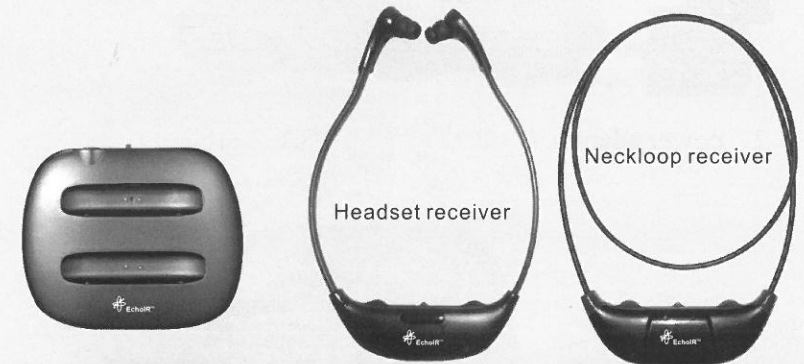

### Introduction

**EchoIR** is a most versatile and technically sophisticated infra red listening system. This equipment will give you complete freedom to listen to your favorite TV or radio programs, enjoy music or conversation, without irritating leads running across the floor. A microphone is also included to further enhance the flexibility of the system allowing it to be used as a personal listener to assist when talking, using the telephone or computer. Please read these instructions carefully as they will ensure that you get the most out of your new **EchoIR** system.

### Features

1. High power transmitter gives excellent range with high quality audio sound.
2. Automatic signal control circuit adjusts any sudden volume increases to keep the output volume stable.
3. Balance control allows individual setting of balance for left and right ears headset version only. **Note: balance is pre-set for neckloop system and must not be adjusted.**
4. Tone control, easy to adjust to individuals preferred setting.
5. Dual charging bay on transmitter for option of two receivers.
6. Comfortable lightweight receiver only 55gms.
7. Comfortable in the ear design soft ear buds to provide maximum amplification with maximum outside noise reduction.
8. Audio and microphone inputs on headset enable headset to be used as a personal listener without use of the transmitter.
9. Approximately 12 hours of listening pleasure on a single full charge.
10. Li-ion charging with auto switch off.
